

VULCAN RF™

...with W.E.T.
Wireless Electronic Technology

Vulcan RF™—The Wave of the Future from Elkhart Brass

For over a century, Elkhart Brass innovations have led the industry in firefighting safety and operating efficiency. Now our exclusive Vulcan RF monitor with Wireless Electronic Technology (W.E.T.) takes firefighting to a new level of performance. Using a hand-held remote, firefighters can direct their fire stream from as far as 1/4 mile away from the monitor for unsurpassed safety and efficiency, or control the monitor with a W.E.T. transmitter mounted to the truck's pump panel.

Vulcan RF™ is designed for increased firefighter safety by eliminating the need to have a firefighter on deck for monitor operation.

Vulcan RF hand-held remote control—lightweight, compact and easy to read; operates up to 1/4 mile away from monitor. Panel control overrides hand-held remote for extra safety. FCC Part 15 compliant for license-free operation.

Unlimited digital security codes and frequency combinations—allow multiple Vulcan RF units to operate in the same area without interference from other radio frequencies, regardless of signal strength.

360-degree continual left/right travel—eliminates dead spots by sending water anywhere you want it to go; Another exclusive Vulcan RF feature. Vertical travel is 135 degrees.

Exclusive dual speed left/right drive—motor automatically shifts to high speed for initial positioning. Slow speed feature allows precision stream placement and direction.

Easy remote programmable automatic oscillation—for exposure protection and hazardous material protection—automatic oscillation with radio programmable limits from 2 to 360 degrees.

Easy two-wire installation—just bolt or thread Vulcan RF to your pumper and connect ground and power wires. Relay box is permanently mounted to monitor. Operates at 12 or 24 volts.

Programmable stow feature—program Vulcan RF to always stow in the same position.

Superior quality Elkhart Brass construction for dependable performance—

- Compact—16" high and 12" wide
- Fully vaned waterway for low friction loss and optimum stream quality
- Fully enclosed stainless steel worm gears
- Motors and control system components sealed to NEMA 4 rating
- Available with 3" female NPT or 3" 150 lb ANSI flange inlet

Call 800-346-0250 for a Vulcan RF™ demonstration and experience the new wave in firefighting.

Shown with optional ST-194 quad stacked tips and 282-A stream shaper.

Shown with optional SM-1250 E nozzle and 282-stream shaper.

Panel-mounted, vehicle-powered pump panel control.

Durable, hand-held transmitter.
