OK, WE’RE GOING TO MAKE THIS REAL SIMPLE FOR YOU.

The new Unibody Valve from Elkhart Brass. Choose your valve and then pick any actuator. It’s that easy. The single-body design makes configuration and installation a snap. With bi-directional flow and no o-rings, service is a piece of cake. And cross-compatibility makes switch-out pain free. So why complicate things, go with the most versatile valve available. Go to elkhartbrass.com or call Elkhart Brass at 800-346-0250 for the simple story.

Elkhart Brass
Fire Fighting Equipment
In addition to the reliability and low friction loss you depend on, the 4” waterway Scorpion RF EXT can travel vertically through 215° — allowing extreme stream positioning versatility regardless of ladder elevation. Like all of Elkhart’s RF monitors, the Scorpion RF EXT is easy to install — 2-wire installation with no motor control wiring needed.

**ELKHART’S 1250 GPM VULCAN RF IS ALSO AVAILABLE IN THE 215° EXTENDED TRAVEL OPTION.**
Elkhart is proud to introduce the answer to your apparatus valve needs — the Unibody — a cross-compatible apparatus valve. The Unibody has been designed to be dimensionally identical to Akron Brass heavy-duty apparatus valves with a single body design to simplify both configuration and installation. Additionally, the Unibody valve features bi-directional flow.

A unique feature of the Unibody valve actuator is the ability to be easily interchanged among the various Unibody valve sizes. It also allows you to install the valve — then select the actuator or change actuators easily without breaking the waterway.

With just 4 bolts, you can change the actuator on any Unibody valve.

Your 2-step selection process: pick a valve size and pick an actuator.

Now available — universal seal kits for apparatus valves. The seal kits are compatible with both Akron’s heavy duty valves and Elkhart’s Unibody valves.
NOW THE GLOW BUMPER CAN BE RETRO-FITTED TO YOUR CURRENT CHIEF AND SELECT-O-MATIC NOZZLES.
