**VERTICAL (TILT) STOP POSITIONS**

*Shown on illustrations 16 thru 21*

- ▲ Indicates required locations for stop screw(s)
- All other locations require plugs.

**HORIZONTAL (PAN) STOP POSITIONS**

*Shown on illustration 5 thru 17*

- ▲ Indicates required locations for stop screw(s)
- All other locations require plugs.

- Horizontal plane (PAN) positions must be aligned with vertical stops and positioned at 0° or 270°. For other positions, select a vertical position to avoid interference.
- Horizontal plane (PAN) positions must be aligned with vertical stops and positioned at 0° or 270°. For other positions, select a vertical position to avoid interference.

**NOTES:**

1. Stop screws should be re-secured with #222 LocTite if moved.
2. Stop screws have the letter "S" stamped in the center of the hex head. Plugs are blank.
3. Stop positions #3, #15, & #17 are set at factory. All other stop positions can be set in field by repositioning stop screws and plugs as needed.
4. When using positions #1 or #2, remove stop screw from hole in top cover and replace with plug.
