1. A. Tighten Sidewinder EXM monitor to base or Quick Connect using Loctite 592 thread sealant or equivalent.

   B. Add a 20A(12VDC)* fuse between RED controller lead and positive power lead.  

   NOTE: We recommend using 16 AWG for monitor power and ground. See installation instructions section of the Sidewinder EXM manual (98317000) for length to gauge recommendations.

   C. Adjust flow by pressing down on locking lever and rotating nozzle to desired flow setting.

   D. Confirm that locking lever is snapped securely into position.

   E. Loosen swivel and reposition nozzle so the locking lever is on the very bottom; 6 o’clock position.

   F. Tighten swivel using a spanner wrench to ensure a secure connection.

   G. Connect nozzle and monitor two-way connectors.

3. Confirm that all connections are tight and all electrical connections have been reconnected. If installing additional components, such as controllers, you may choose to double check the connections after everything has been installed.
4. A. Install valve into plumbing. Torque adapter bolts to spec using Figure 1.

NOTE: If you need to change the orientation of the electric actuator on top of the valve, follow the instructions on page 16 of the Unibody Valve Manual (98311000). Manual can be found at: www.elkhartbrass.com/downloads/manuals

B. Add a 30A (12VDC)* fuse between RED controller lead and positive power lead. *15A (24VDC)

5. A. Follow mounting templates on page 30 of the instruction manual for hole diameters and dimensions.

B. Drill holes for CAN network and power cables for each components’ leads behind each component.

C. Mount components to panel using 10-24 x 1/2” screws. Use Loctite 242 or equivalent.

D. Add a 1A (12VDC)* fuse between red component lead and positive power lead. * .5A (24VDC)

6. A. Connect entire CAN network together using 18-22 AWG. Ensure every component connected to the CAN network is connected in between 2 end components that have CAN termination. Please refer to the BLUE, GREEN, and BLACK lines as the CAN wires below.

B. Add a 30A (12VDC)* fuse between RED controller lead and positive power lead.

Before continuing, please refer to the EXM Configuration Tool Manual (98510000) to configure the EXM system.
Quick Attack Pkg 1 Install Guide: Setup Mode

**CALIBRATE VALVE**
Press and hold <Aux> and <Preset> until the blue status LED on monitor box turns on.

**ENTER SETUP MODE**
This step is required (R).

**EXIT SETUP MODE**
Aim monitor at center forward “zero” position. Hold <Preset>, then move the joystick to the <Left> or <Right> and hold until status LED on monitor blinks & returns to solid.

**SET MONITOR SPEED**
Move monitor to a travel limit position. Hold <Stream>, and move the joystick forward to set the lower limit, and pull back to set the upper limit.

**SET VER TRAVEL LIMIT**
Max travel of 135° below the pre-calibrated “zero” position.

**SET HOR TRAVEL LIMIT**
Max travel of 175° in either direction from the calibrated “zero” position.

**SET KEEP-OUT ZONES**
Move monitor to desired position, then press <Fog> and <Osc> at the same time to store a stow position.

Stow position must be within allowed limits of travel.

**SET STOW POSITION**
Press and hold <Aux> and <Preset> until the blue status LED on monitor box turns off.

**NOTE:** You will also need to calibrate the valve before use. While you are NOT in setup mode, press and hold <Preset> and <Close> for approximately 5 seconds. The valve will automatically start to calibrate itself.

The following steps are optional (O).

Pressing the <Osc> button will cycle through the monitor motor speed options:

LEDs - Ver / Hor
0 - Fast / Fast
1 - Slow / Fast
2 - Fast / Slow
3 - Slow / Slow

**LOWER LEFT ZONE:**
Move to top/right corner of the lower left zone, hold <Preset>, press <Close>, and release both.

**LOWER RIGHT ZONE:**
Move to top/left corner of the lower right zone, hold <Preset>, press <Close>, and release both.

**STATUS POWER**

**UP**

**DOWN**

**Stream**

**Right**

**Left**

**Preset**
**Button Press Logic: Joystick**

**To Stow**
Hold <Fog> and <Osc> until monitor begins to stow.

**To Oscillate**
Press the <Osc> button at both extremities of the desired oscillation pattern.

![Joystick Layout](image)

**NOTE:** You can manually control nozzle position while in a single axis oscillation. Example: Up and Down will allow you to manually control the vertical axis while in a horizontal oscillation. Any direction in a two axis oscillation will stop the oscillation.

**Left, Right, Up, Down**
These function normally

**Fog & Straight Stream**
These function normally

**Valve Open & Close**
These function normally

**Valve Preset**
Opens or closes valve to a predetermined position

**To Change Valve Preset**
Open or close the valve to the desired position. Press and hold the <Preset> button until the preset light blinks (approx 10 seconds).

**Valve Auto Travel**
To auto travel OPEN, hold the <Open> button, then press <Close>, and release both. The valve should fully open automatically. To CLOSE, hold the <Close> button, then press <Open>, and release both.
